PADILLA BAY

Padilla Bay is an estuary. Thousands of years ago the Skagit River meandered back and forth between Skagit and Padilla Bays. Huge brackish marshes laid north and south of the Bay View Ridge, where the Breazeale Interpretive Center is now located. In the late 1800's the river mouth was confined to Skagit Bay, leaving Padilla Bay "orphaned" from its river. Today Padilla Bay's freshwater comes from a number of agricultural sloughs and the Swinomish Channel which connects Skagit and Padilla Bays.

Research is conducted at Padilla Bay to monitor plant and animal populations, evaluated sources of pollution, protect water quality, and to understand ecological processes operating in the bay and the bay's relationship to greater Puget Sound. Padilla Bay, the only National Estuarine Research Reserve in Washington State, was designated in 1980 and is managed the Washington State Department of Ecology. The Reserve owns and manages approximately 11,000 acres of the bay and nearly 200 upland acres.

Thanks for making the 27th Tulip Rallye another fabulous success. If you had fun, tell your friends to join us next year. People who do wish to complain will only help put the country deeper into recession. It's hard to explain how it all exactly works. It's a complex formula, you see. Go ahead and register any grievance, but you're hurting the economy. Trust us.

SEE YOU NEXT YEAR!
